## What does T-SDC do?

1

Organization of a centralized storage of subscribers' documents.

2

Organization of the operator's remote workplace.

3

Template mechanism support for customizing documents.

4

Organization of the process of printing subscriber documents.

5

Generation of printed forms of documents.

6

Regular documents delivery to subscribers by e-mail.

02 Generation of printed forms of documents:

- For viewing;
- For printing;
- For e-mail delivery.

03 E-mail delivery of invoices and itemization connections:

- Package;
- On demand.

## Capabilities

01 Uploading invoices to storage:

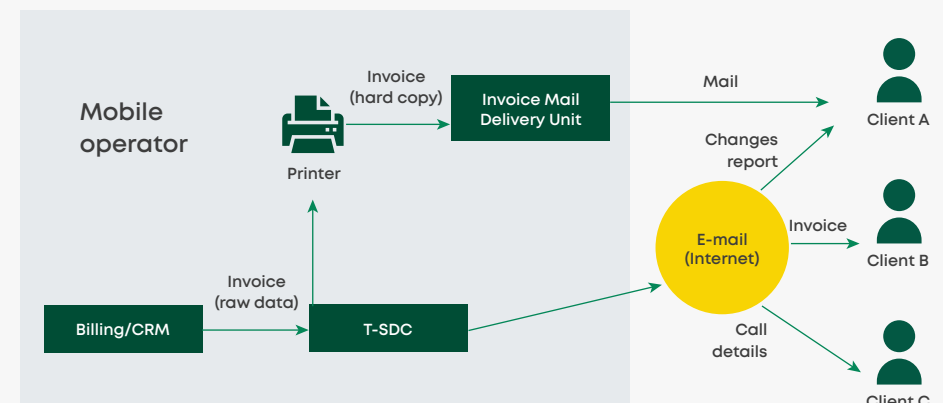

- Interface:
  - FTP;
  - SOAP.
- Format:
  - XML.

## Additional Features

- Printing a barcode on the cover page of a regular invoice (PDF format).
- Possibility to include an advertising page in the printed form of the regular invoice.
- Application programming interface (API) for external systems (such as CRM, Personal Account, etc.).

## T-SDC capabilities

- Managing and tracking the status of documents.
- Ability to add new invoice/document templates and use multiple templates at the same time.
- The user can be authenticated using the built-in T-SDC authentication (internal) or using the Active Directory mechanism (external).
- Ensuring security based on access lists (ACL - Access Control List):
  - Account Administrator;
  - Client manager;
  - User Administrator;
  - Reference Data Administrator;
  - Inspector;
  - Print agent.

## T-SDC interfaces

### 01

#### Interfaces with external systems:
